## **DETAILED ACTION**

### ***Response to Restrictions***

1. The Response to Restriction filed 10 December 2008 has been received. However, the Requirement for Restriction filed 05 December 2008 was incorrect. Because the instant application is a submission under 35 U.S.C. 371, special international provisions regarding Unity of Invention pertain. The Examiner apologizes for the error. A corrected Requirement for Restriction has been included below.

### ***Election/Restrictions***

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- a. Group I, claim(s) 1-8, drawn to an inorganic luminescent material containing sulfur, classified in class 252, subclass 301.4S.
- b. Group II, claim(s) 9-18, drawn to a radiation detector having optical collection elements, classified in class 250, subclass 368.

3. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

- a. The special technical feature of claims 1 and 5 is the increased efficiency of the Bragg Peak Region related to the reference and relative dose of an inorganic scintillator.

Art Unit: 2884

b. The special technical feature of claim 9 is the three dimensional sensor array and physical arrangement of the detector.

c. Since the special technical features 1) are not the same, and 2) do not necessarily correspond to each other (the charged particle sensor assembly of group II does require the specific inorganic scintillation mixture of group I to be operable, while the inorganic scintillation mixture of group I may be used in a detector other than the charged particle sensor assembly of group II) the claims do not form a single general inventive concept.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
